Valencia, Spain, +34 696 075 650 pablozalliodev@gmail.com

 [Linkedin](#)  [GitHub](#)

One year of intense software development experience, focused on building products that truly work. I focus on code quality and working collaboratively with agile methodologies to deliver value quickly. I excel at teamwork, ensuring that the code is maintainable and suitable for the product's future scalability. My passion is problem-solving and applying innovation for collective success.

Experience

Stack & Flow.

Front-end Developer

Valencia, Spain

June, 2025–Present

- Comparative analysis (benchmarking) of similar platform components, resulting in the design and implementation of more robust and comprehensive solutions for the Design System.
- Participation in the development of modular components for a Design System.
- Implementation of robust components using React and TypeScript, ensuring code quality and strict typing.

Landing Page - Carniceria Puro Ganado.

Front-end Developer

Valencia, Spain

June, 2025 - July, 2025

- Full development of a responsive and accessible Landing Page for the butcher shop, using HTML5, CSS3, and vanilla JavaScript.
- Optimization of images and multimedia content to ensure fast loading (fast Time-to-Content) and improve user experience (UX).
- Implementation of a functional contact form and clear Calls to Action (CTAs), focused on increasing the conversion rate of visitors to potential customers.

Diccionario web.

Front-end Developer

Valencia, Spain

September, 2025 - September, 2025

- Development of a fully functional dictionary application using React and TypeScript, implementing a scalable component architecture and strict typing.
- Integration of an external dictionary API for real-time search of definitions, synonyms, antonyms, and usage examples.
- Management of application state and error handling (e.g., word not found, API failures) to ensure a robust and fluid user experience (UX).
- Design and implementation of a responsive user interface that perfectly adapts to mobile and desktop devices, with a focus on accessibility (A11y).

Soft Skills

- Proactivity: Demonstrated ability to identify problems and propose technical solutions without constant supervision.
- Adaptability and Continuous Learning: Strong willingness to quickly assimilate new technologies (APIs, frameworks, or libraries) and work methodologies.
- Technical Communication: Effectiveness in documenting processes and presenting technical development decisions.
